TOTAL			**$100**	

SUCCESS CRITERIA (Hormozi Framework)

48-hour check:

- 100+ waitlist signups from organic = strong signal, scale paid
- 50-100 = decent signal, iterate copy
- Under 50 = weak signal, rethink positioning

5-day check (after paid):

- Cost per lead under $2 = validated demand, invest in dev ($99 Apple account)
- Cost per lead $2-5 = moderate demand, optimize funnel first
- Cost per lead over $5 = pivot positioning or reconsider

Ultimate validation: If people reply to the Day 3/Day 7 SMS drip texts with feature requests, you have REAL demand — people are engaged enough to text back.
