

## PARTNERSHIP PROPOSAL

# Your Roofing Lead Marketplace — Built to Launch

AI-Powered Scoring · Real-Time Bidding · Contractor Dashboards

Prepared by Marceau Solutions | April 11, 2026

Embrace the Pain & Defy the Odds

## 1. STRAIGHT TALK

I'm not going to pitch you like a typical agency. Here's where I'm at:

I see what you're building. A roofing lead marketplace with AI scoring and real-time bidding is not a small idea — it's infrastructure for an industry. Companies like this, when they hit, become the backbone that everyone else runs on. I don't want to just build your platform and send an invoice. I want to be the guy who helped build it from the ground floor.

That means I'm going to be honest with you about what this takes, price it in a way that makes sense for where you are right now, and earn your trust by delivering — not by overselling. If this thing grows the way I think it can, we both win.

**My commitment:** I'm pricing this to get us moving — not to maximize my invoice. You'll see exactly what you're paying for at every step, and you'll never wonder if I'm padding hours or inflating scope. If something doesn't need to be built yet, I'll tell you. If there's a faster way, we'll take it.

## 2. WHAT WE'RE BUILDING

Five integrated subsystems that together form a complete lead marketplace. We build them in phases so you're generating revenue before we finish the last one.

### Lead Ingestion Pipeline

- Homeowner-facing web forms and landing pages
- Call center integrations via webhook/API

- Partner referral APIs for third-party lead sources
- Storm damage detection feeds (NOAA, weather event APIs)
- Manual entry for your team to inject leads directly

### AI Scoring Engine

- Satellite imagery analysis (roof condition, age, material)
- Storm data correlation (proximity, severity)
- Property records lookup (ownership, value, square footage)
- Insurance claim signal detection
- 0–100 appointment score so contractors bid with confidence

### Real-Time Bidding System

- Live bidding with instant UI updates
- Auto-bid engine — set it and forget it
- Buy-now pricing for contractors who want immediate lock
- Territory locks at zip code and county level
- Full bid history and audit trail

### Contractor Dashboard

- Account management and profile setup
- Active bids, won leads, and lead history
- Territory selection and auto-bid configuration
- Analytics: win rate, cost-per-lead, ROI by territory
- Notification preferences (SMS, email, push)
- Stripe self-service billing and subscription management

### Admin Platform

- Lead review and approval queue
- Refund workflow with dispute management
- Contractor management (approve, suspend, tier changes)
- Revenue tracking and payout reporting
- System analytics and health monitoring

### 3. SPRINT TIMELINE — 30 DAYS TO LIVE

**Goal: Contractors bidding on real leads within 30 days**

I'm not going to give you a 4-month timeline. You're moving fast and the market won't wait. Here's the aggressive schedule I'll commit to — it's tight, but it's what I'd want if I were in your shoes.

#### How We Move This Fast

- Supabase handles auth, database, and real-time subscriptions out of the box — no building from scratch
- n8n workflow automation builds lead ingestion pipelines in days, not weeks
- Stripe integration for subscriptions + per-lead billing — already proven in production
- AI-assisted development (not shortcuts — real architecture, 2-3x faster execution)
- Existing SMS/email infrastructure via Twilio and SES — plug and play

#### Week-by-Week Delivery

| Week   | Focus            | What Ships                                                                            |
|--------|------------------|---------------------------------------------------------------------------------------|
| Week 1 | Foundation       | Auth, database schema, contractor dashboard scaffold, Stripe billing wired up         |
| Week 2 | Lead Engine      | Lead ingestion (web forms + manual entry), rule-based scoring (0–100), admin panel    |
| Week 3 | Marketplace Core | Bidding system (manual + auto-bid), territory locks, buy-now, real-time notifications |
| Week 4 | Polish & Launch  | QA, mobile responsive, load testing, production deploy — you're live                  |

#### Phase 2 — AI Scoring (Weeks 5–8, After Launch)

Once you're live and generating revenue with rule-based scoring, we layer on the AI scoring engine — satellite imagery, storm data, property records. This is the competitive moat, but it doesn't need to gate your launch.

- Satellite imagery API integration (Google/Nearmap)
- Storm data feeds and severity correlation
- Property records API (ATTOM/CoreLogic)
- ML scoring model — replaces rule-based with true AI scoring

**Why this order matters:** You start collecting revenue in 30 days with rule-based scoring. Contractors don't know or care whether the score comes from rules or ML — they care that it's accurate and they're getting exclusive leads. We upgrade the engine under the hood while the business is already running.

## 4. INVESTMENT — BUILT FOR WHERE YOU ARE NOW

I've structured this so the upfront number doesn't slow us down. You're in growth mode and profitable by month two — I don't need to front-load the cost. I'd rather get this built, prove the value, and grow together.

### Phase 1 — MVP Launch | \$8,500 | 4 Weeks

Everything you need to go live and start generating revenue:

- Contractor auth, profiles, and self-service dashboards
- Lead ingestion: web forms, manual entry, partner webhook API
- Rule-based scoring engine (0–100 based on property data, location, storm history)
- Real-time bidding system — manual bids + auto-bid engine
- Territory locks at zip code and county level
- Stripe billing: \$87/mo subscription + per-lead charges (\$75 auction / \$149+ buy-now)
- SMS and email notifications (new leads, outbid alerts, win confirmations)
- Full admin panel: lead review, refunds, contractor management, revenue dashboard
- Production deployment on your domain — fully live

### Phase 2 — AI Scoring Engine | \$6,500 | Weeks 5–8

The competitive moat — layered on after you're already live and earning:

- Satellite imagery API: roof condition, age, material analysis
- Storm data correlation: event proximity, severity scoring
- Property records API: ownership, value, insurance signals
- ML-powered scoring model replaces rule-based engine
- Advanced analytics: ROI by territory, lead quality trends

### Ongoing Partnership | \$1,500/mo

After launch, I stay on as your technical partner — not just a maintenance vendor:

- Bug fixes, updates, and performance optimization

- New feature development as the business scales
- Infrastructure management and monitoring
- Priority response — direct line, not a ticket queue

**Total to full platform with AI scoring:** \$15,000 over 8 weeks — then \$1,500/mo ongoing.  
Compare that to \$50–80K from an agency that takes 4–5 months and disappears after delivery.

**Third-party API costs** (you pay directly — full transparency):

- Hosting (Supabase + deployment): ~\$50–200/mo
- Satellite imagery API: ~\$500–1,500/mo (Phase 2 only, scales with volume)
- Property records API: ~\$300–800/mo (Phase 2 only)
- Storm data: Free (NOAA) to \$200/mo (premium feeds)

## 5. WHY I'M PRICING IT THIS WAY

---

I want to be transparent about why this is priced well below market rate:

- **I believe in what you're building.** A roofing lead marketplace with AI scoring and exclusive territory bidding is the kind of platform that becomes essential infrastructure. I'd rather be part of that story early than charge top dollar and be forgotten.
- **I'm investing in the relationship, not the invoice.** If this platform takes off — and the early signs say it will — the ongoing partnership is worth more to me than a one-time payout. I'm pricing Phase 1 to remove friction, not to leave money on the table.
- **I want to earn your trust, not buy it.** You'll see working software every week. You'll have full source code access from day one. If at any point you feel like this isn't working, you own everything we've built and can walk away. No lock-in, no hostage code.
- **I'm building my portfolio on real platforms, not landing pages.** A system like this — real-time bidding, AI scoring, Stripe billing at scale — that's the kind of work that defines a company. I'd rather have one client with a platform like this than ten clients with brochure websites.

**"I'm not here to take advantage of the opportunity. I'm here to earn my seat at the table."**

## 6. HOW WE WORK TOGETHER

---

### Communication

- Direct line to me — phone, text, or email. No middlemen.
- Weekly demo of what shipped that week — you see it running, not in a slide deck
- Shared project board so you always know exactly where we are

### Payment Structure

Structured to keep risk low for both of us:

- **Phase 1:** \$4,250 to start → \$4,250 when you're live (50/50 split)
- **Phase 2:** \$3,250 to start → \$3,250 when AI scoring is deployed
- **Ongoing:** \$1,500/mo — cancel anytime with 30 days notice

### What You Own

- Full source code — transferred at each milestone payment
- All infrastructure accounts (Supabase, Stripe, APIs) in your name

- Complete documentation so any developer could pick it up
- No proprietary lock-in, no hidden dependencies on me

**Next step:** Let's get on a call and walk through the technical details. I'll answer every question you have, and if it makes sense for both of us, we can be building by next week.
