

## PARTNERSHIP PROPOSAL

# AI Executive Assistant

## One System to Run Three Companies

Grant Construction & Roofing | Blue Collar Exits | Lead Marketplace

Prepared for Vince Grant | April 11, 2026

Prepared by Marceau Solutions

## 1. THE PROBLEM

You're running three companies. Every morning you wake up to emails from contractors, deal inquiries from business owners looking to sell, roofing leads that need follow-up, and a calendar that's pulling you in three directions. You're the bottleneck — not because you're slow, but because there's only one of you.

The daily tasks that eat your time aren't hard — they're repetitive. Triaging emails, following up with leads, scheduling calls, checking on deals, reviewing new contractor applications. Any one of these is five minutes. Across three businesses, it's half your day.

**The goal:** An AI system that handles the repetitive daily operations across all three businesses — so you can focus on closing deals, growing the marketplace, and running crews, not managing inboxes and calendars.

## 2. WHAT YOUR AI ASSISTANT DOES

One unified system that knows about all three businesses and handles daily operations across each. It doesn't replace your judgment — it gives you the information you need faster and handles the tasks that don't require your judgment at all.

### Daily Morning Briefing

Every morning, delivered to your phone by text or email — before you finish your coffee:

- **Grant Roofs:** Today's scheduled jobs, any customer follow-ups due, new leads overnight, crew schedule conflicts
- **Blue Collar Exits:** Active deal pipeline status, new seller inquiries, investor responses, upcoming calls

- **Marketplace:** Overnight lead volume, contractor sign-ups, revenue snapshot, any refund requests pending
- **Calendar:** Today's meetings across all three businesses, prep notes for each call
- **Priority inbox:** Emails that actually need your attention — everything else is already handled

## Intelligent Email Management

The assistant monitors your email across all three businesses and takes action:

- Categorizes every email by business and urgency — you see what matters first
- Drafts responses for routine inquiries (estimates, scheduling, deal questions) — you approve with one tap
- Auto-routes leads to the right pipeline (roofing lead vs. business seller vs. marketplace contractor)
- Flags time-sensitive items immediately via SMS — don't wait until you check email
- Archives and organizes everything — searchable history across all three businesses

## Calendar & Scheduling Automation

- Manages one unified calendar across all three businesses with color-coded context
- Auto-schedules follow-up calls when deals hit milestones (Blue Collar Exits pipeline)
- Sends appointment confirmations and reminders to customers (Grant Roofs)
- Blocks time for crew site visits, deal meetings, and marketplace reviews
- Reschedules conflicts automatically based on priority rules you set

### 3. BUSINESS-SPECIFIC AUTOMATION

#### Grant Construction & Roofing

- **Lead follow-up:** New roofing inquiries get an immediate response with scheduling link — no leads go cold overnight
- **Estimate follow-up:** Automatically follows up on sent estimates at day 2, 5, and 10 — stops when they respond
- **Review requests:** After job completion, sends Google review request to homeowner — builds your reviews on autopilot
- **Crew scheduling alerts:** Weather-based job rescheduling notifications to you and crew leads
- **Insurance claim tracking:** Monitors claim status and alerts you when action is needed

#### Blue Collar Exits

- **Deal pipeline management:** Tracks every deal stage — from initial inquiry to close — surfaces what needs your attention today
- **Seller outreach follow-up:** Automated follow-up sequences for business owners who inquired but haven't committed
- **Investor matching alerts:** When a new seller profile matches an investor's criteria, you're notified immediately
- **Document tracking:** Monitors NDA, LOI, and due diligence timelines — alerts before deadlines
- **Meeting prep:** Before every seller or investor call, the assistant pulls deal history, financials discussed, and open items into a one-page brief

#### Roofing Lead Marketplace

- **Daily revenue and lead volume dashboard:** Delivered in your morning briefing — no logging in required
- **Contractor onboarding:** New sign-up notifications with auto-generated welcome sequences
- **Refund/dispute triage:** Reviews refund requests against lead data and recommends approve/deny before you touch it
- **Lead quality monitoring:** Flags anomalies in lead quality or conversion rates before they become problems
- **Growth metrics:** Weekly summary of contractor retention, territory fill rates, and revenue per lead trends

## 4. HOW IT WORKS — UNDER THE HOOD

This isn't a chatbot. It's an automation system that runs 24/7 in the background and surfaces what you need, when you need it. Here's the architecture:

| Component           | What It Does                                                                                                                           |
|---------------------|----------------------------------------------------------------------------------------------------------------------------------------|
| Email Integration   | Connects to your Gmail/Outlook for all three businesses. Reads, categorizes, drafts, and sends.                                        |
| Calendar Sync       | Google Calendar or Outlook — manages scheduling, conflicts, and reminders across all businesses.                                       |
| CRM / Pipeline      | Tracks leads (Grant Roofs), deals (Blue Collar Exits), and contractors (Marketplace) in one unified view.                              |
| SMS / Notifications | Priority alerts via text message. Morning briefing delivered to your phone.                                                            |
| AI Engine           | Understands context across all three businesses. Knows that a contractor inquiry might relate to both Grant Roofs and the marketplace. |
| Automation Layer    | n8n workflow engine — triggers, follow-ups, and sequences run automatically without human intervention.                                |
| Dashboard           | Web-based command center you can check from your phone. One view, three businesses.                                                    |

**Key point:** You interact with it through your normal tools — email, text, phone, calendar. There's no new app to learn. The AI works in the background and surfaces information through the channels you already use. The dashboard is there when you want the full picture, but everything critical comes to you.

## 5. SPRINT TIMELINE — 3 WEEKS TO RUNNING

We build this in layers. Week 1 you're already getting value. By week 3, the full system is running across all three businesses.

| Week   | Focus                         | What Ships                                                                                                                                                                                                   |
|--------|-------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Week 1 | Foundation + Morning Briefing | Email integration across all 3 businesses, calendar sync, daily morning briefing delivered to your phone, priority inbox triage, SMS alerts for urgent items                                                 |
| Week 2 | Business Automation           | Grant Roofs: lead follow-up + estimate sequences + review requests. Blue Collar Exits: deal pipeline tracking + follow-up automation + meeting prep briefs. Auto-draft email responses across all businesses |
| Week 3 | Intelligence + Dashboard      | Marketplace monitoring + contractor onboarding automation. Cross-business dashboard. Refund triage. Growth metrics. Calendar automation with conflict resolution. Full system live.                          |

**After week 1**, you wake up to a morning briefing covering all three businesses. That alone changes your day. Everything after that is layering on more automation.

## 6. INVESTMENT

Same philosophy as the marketplace proposal — I'm pricing this to get us moving, not to maximize the invoice. The ongoing partnership is where this makes sense for both of us.

| Setup Build + Launch | Monthly Partnership | Year 1 Total Investment |
|----------------------|---------------------|-------------------------|
| <b>\$5,000</b>       | <b>\$1,200/mo</b>   | <b>\$18,400</b>         |
| 3 weeks              | Ongoing             | Setup + 12 months       |

### What the Setup (\$5,000) Covers

- Email integration across all three businesses (Gmail/Outlook)
- Calendar sync and unified scheduling system
- Morning briefing engine — daily digest delivered to your phone
- Grant Roofs: lead follow-up, estimate sequences, review request automation
- Blue Collar Exits: deal pipeline tracking, follow-up sequences, meeting prep
- Marketplace: revenue dashboard, contractor onboarding, refund triage
- SMS notification system for priority alerts
- Web dashboard — one view, three businesses
- Full deployment and testing across all businesses

### What the Monthly (\$1,200/mo) Covers

- System monitoring — if something breaks, I fix it before you notice
- New automation additions as your businesses evolve (new follow-up sequences, new pipelines, new integrations)
- AI model updates and improvements to email drafting, lead scoring, and prioritization
- Infrastructure costs (hosting, email APIs, SMS credits, AI processing)
- Direct line to me — not a ticket queue. Phone, text, or email.
- Cancel anytime with 30 days notice — you keep everything

### Payment Structure

- **Setup:** \$2,500 to start, \$2,500 when the system is live and you've used it for a week
- **Monthly:** \$1,200/mo — first month starts after the system is fully deployed
- **No long-term contract:** Month-to-month. The system earns its keep or you cancel.

**The math:** If this system saves you 2 hours a day across three businesses — and it will save more than that — that's 40+ hours a month you're getting back. At \$1,200/mo, that's \$30/hour for your time back. The real value isn't the hours though — it's the leads that don't go cold, the follow-ups that don't get missed, and the deals that don't slip because you were buried in the wrong inbox.

## 7. WHY I KNOW THIS WORKS

I'm not pitching you something theoretical. I built this system for myself — I run multiple business lines and the AI assistant I use every day is the foundation of what I'm proposing here. Morning briefings, email triage, pipeline tracking, automated follow-ups — it's all running in production, right now, for my own businesses.

What I'm proposing is adapting that proven system to your three businesses. The infrastructure exists. The patterns are tested. The hardest part — figuring out what works and what doesn't — is already done. That's why the timeline is 3 weeks instead of 3 months.

**"I built this for myself first. Now I'm offering to build it for you."**

## 8. NEXT STEPS

Here's how we get started:

- **Step 1: 30-minute walkthrough call** — I'll show you the system running on my own businesses so you can see exactly what you'd be getting. We'll map out your specific workflows across all three companies.
- **Step 2: I build a custom integration plan** — within 48 hours of the call, you'll have a detailed map of every automation, every email integration, and every workflow, tailored to Grant Roofs, Blue Collar Exits, and the marketplace.
- **Step 3: \$2,500 deposit and we start building** — I begin connecting to your systems in week 1. By day 7, you're getting your first morning briefing.
- **Step 4: Full system live in 3 weeks** — all three businesses automated. Second payment of \$2,500. Monthly partnership begins.

---

**Ready to see it in action?** Let's get on a call and I'll walk you through the live system.
